## Starship™ Scarlet Lobelia

*Lobelia 'Starship Scarlet'*

Height: 24 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight: ○ ●

Hardiness Zone: 5b

Other Names: Cardinal Flower

Group/Class: Starship Series

### Description:

This variety has stunning large spikes of bright scarlet flowers and foliage that will have streaks of burgundy when mature; looks wonderful in mass plantings along borders

### Ornamental Features

Starship Scarlet Lobelia features showy spikes of scarlet flowers rising above the foliage from mid summer to early fall. The flowers are excellent for cutting. Its pointy leaves emerge burgundy in spring, turning green in color with prominent coppery-bronze tips throughout the season.

### Landscape Attributes

Starship Scarlet Lobelia is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Starship Scarlet Lobelia is recommended for the following landscape applications;

### **Planting & Growing**

Starship Scarlet Lobelia will grow to be about 20 inches tall at maturity, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. It has a low canopy with a typical clearance of 1 foot from the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Starship Scarlet Lobelia is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
