## Jewel of Spring Tulip

*Tulipa 'Jewel of Spring'*

Plant Height: 20 inches

Flower Height: 28 inches

Spread: 12 inches

Spacing: 6 inches

Sunlight: ☉

Hardiness Zone: 2a

### Ornamental Features

Jewel of Spring Tulip has masses of beautiful buttery yellow cup-shaped flowers with black eyes and rose edges at the ends of the stems in mid spring, which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves remain green in color throughout the season. The fruit is not ornamentally significant.

### Landscape Attributes

Jewel of Spring Tulip is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Jewel of Spring Tulip is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

### Planting & Growing

Jewel of Spring Tulip will grow to be about 20 inches tall at maturity extending to 28 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 6 inches apart. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

---

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
