Jelena Witchhazel
Hamamelis x intermedia 'Jelena'

Height: 15 feet

Spread: 15 feet

Sunlight: ○ ● ●

Hardiness Zone: 5b

Other Names: Witch Hazel

Description:

A medium sized spreading shrub with dazzling rich copper-red flowers that appear along the bare branches in late winter, superb fall colors; brings welcome color and fragrance to the late winter garden when most other plants are still dormant

Ornamental Features

Jelena Witchhazel is clothed in stunning fragrant coppery-bronze strap-like flowers with yellow overtones and burgundy calyces along the branches from late winter to early spring before the leaves. It has green foliage throughout the season. The serrated round leaves turn an outstanding orange in the fall. The fruit is not ornamentally significant.

Landscape Attributes

Jelena Witchhazel is a multi-stemmed deciduous shrub with a ground-hugging habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

Jelena Witchhazel is recommended for the following landscape applications;

Planting & Growing

Jelena Witchhazel will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub performs well in both full sun and full shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.
