Description:

An excellent groundcover shrub with white bell flowers in early spring and dark green needle-like foliage; vigorous growing, but prune lightly only to shape; requires organic highly acidic soil, full sun and absolutely no standing water

Ornamental Features

Mediterranean White Heath is covered in stunning spikes of white bell-shaped flowers rising above the foliage from late winter to mid spring, which emerge from distinctive creamy white flower buds. It has dark green evergreen foliage. The tiny needles remain dark green throughout the winter.

Landscape Attributes

Mediterranean White Heath is a multi-stemmed evergreen shrub with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Mediterranean White Heath is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens

Ann Arbor 734-332-7900 155 N. Maple at Jackson	Clinton Twp. 586-286-6100 44850 Garfield Rd.	Dearborn Heights 313-278-4433 22650 Ford Rd.	Eastpointe 586-771-4200 22501 Kelly Rd.	Royal Oak 248-280-9500 4901 Coolidge Rd.	West Bloomfield 248-851-7506 6370 Orchard Lake Rd.

Planting & Growing

Mediterranean White Heath will grow to be about 15 inches tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
