**Cara Mia™ Rose Coneflower\***  
*Echinacea 'TNECHCMR'*

Height: 20 inches

Spread: 30 inches

Sunlight: ☉

Hardiness Zone: 4a

Group/Class: Cara Mia®; Series

**Description:**

This stunning echinacea produces attractive raspberry pink, fully double flowers; a perfect choice for planting in groups, along border edges, or in containers; flowers come early and keep coming until frost; attracts pollinators

**Ornamental Features**

Cara Mia Rose Coneflower has masses of beautiful lightly-scented scarlet daisy flowers with hot pink overtones at the ends of the stems from mid spring to mid fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its pointy leaves remain green in color throughout the season. The fruit is not ornamentally significant.

**Landscape Attributes**

Cara Mia Rose Coneflower is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting birds and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Cara Mia Rose Coneflower is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

### **Planting & Growing**

Cara Mia Rose Coneflower will grow to be about 16 inches tall at maturity, with a spread of 30 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Cara Mia Rose Coneflower is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
