Strawberry Milkshake Stonecrop
Sedum 'Strawberry Milkshake'

Height: 24 inches

Spread: 3 feet

Spacing: 30 inches

Sunlight: ○ ●

Hardiness Zone: 3a

Other Names: Autumn Stonecrop, Showy Stonecrop

Description:

This exceptional variety features rich bronze foliage, topped by dark and light pink flowers, that cover the dome shaped plant in late summer; very showy in a mass planting, prefers poor soils and dry conditions; heat and drought tolerant

Ornamental Features

Strawberry Milkshake Stonecrop has masses of beautiful clusters of rose star-shaped flowers with shell pink overtones at the ends of the stems from late summer to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its attractive large succulent oval leaves remain olive green in color with showy coppery-bronze variegation and tinges of deep purple throughout the season. The brick red stems can be quite attractive.

Landscape Attributes

Strawberry Milkshake Stonecrop is a dense herbaceous perennial with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Strawberry Milkshake Stonecrop is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Strawberry Milkshake Stonecrop will grow to be about 20 inches tall at maturity, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 15 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Strawberry Milkshake Stonecrop is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
