Kira™ Arizona Coral Bells

Heuchera 'Kira Arizona'

Plant Height: 14 inches

Flower Height: 20 inches

Spread: 14 inches

Spacing: 12 inches

Sunlight: ☉ ● ●

Hardiness Zone: 4a

Other Names: Coralbells, Alumroot

Group/Class: Kira Series

Description:

Emerging foliage is silvery with brilliant red veins, maturing to lighter red, then gray green; dainty bells on red spikes in early summer; an amazing foliage color addition with great versatility; keep soil moist in heat of summer

Ornamental Features

Kira Arizona Coral Bells features dainty spikes of red bell-shaped flowers with white overtones rising above the foliage from early to mid summer. Its attractive lobed leaves emerge red in spring, turning silver in color with distinctive dark red veins and tinges of grayish green the rest of the year.

Landscape Attributes

Kira Arizona Coral Bells is a dense herbaceous evergreen perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting hummingbirds to your yard. It has no significant negative characteristics.

Kira Arizona Coral Bells is recommended for the following landscape applications;

Planting & Growing

Kira Arizona Coral Bells will grow to be about 14 inches tall at maturity extending to 20 inches tall with the flowers, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Kira Arizona Coral Bells is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
